Committee for Medicinal Products for Human Use (CHMP)

Summary of opinion¹ (post authorisation)

Ferriprox deferiprone

On 28 April 2016 the Committee for Medicinal Products for Human Use (CHMP) adopted a positive opinion recommending a change to the terms of the marketing authorisation for the medicinal product Ferriprox. The marketing authorisation holder for this medicinal product is Apotex Europe BV.

The CHMP adopted an extension to the existing indication as follows²:

Ferriprox **monotherapy** is indicated for the treatment of iron overload in patients with thalassaemia major when **current chelation** ~~deferoxamine~~ therapy is contraindicated or inadequate.

Ferriprox in combination with another chelator (see section 4.4) is indicated in patients with thalassaemia major when monotherapy with any iron chelator is ineffective, or when prevention or treatment of life-threatening consequences of iron overload (mainly cardiac overload) justifies rapid or intensive correction (see section 4.2).

Detailed recommendations for the use of this product will be described in the updated summary of product characteristics (SmPC), which will be published in the revised European public assessment report (EPAR), and will be available in all official European Union languages after a decision on this change to the marketing authorisation has been granted by the European Commission.

¹ Summaries of positive opinion are published without prejudice to the Commission decision, which will normally be issued 67 days from adoption of the opinion
